

Service Infrastructure Test Bed

Company: Large Multinational Corporation

Location: Japan

Customer Description

The customer is in the software research department of a large Japanese multinational corporation, whose products and related software are being sold throughout the world, including Japan, US, The America's, Australia, Asia and Europe.

Business Need

The customer required automated deployment tools for the MPlus system, allowing the MPlus system to be deployed anywhere in the world in an easy-to-use process.

The customer required the deployment tool to be completely automated, reducing the risk of human error.

The customer requested forward thinking and planning for future expected improvements in the coming decades of technology platforms, and specified the deployment tool to be independent from specific software platforms so that the MPlus system can be deployed on any windows operating system.

Solution Offered

Intechno provided the customer with a project feasibility report, carried out a thorough study into the deployment process of the MPlus system and its project, proposed an intuitive cross-platform solution, designed a set of scalable service deployment frameworks, defined a common deployment interface and implemented the deployment process of the existing service.

Users only need to enter in the necessary configuration information during the system startup and then the deployment tool will automatically follow through with the rest of the process without the need for human interaction.

Provided the customer with detailed interface descriptions, help documentation for secondary development, detailed user manuals and easy-to-understand training materials.

Delivered a wealth of documentation for post delivery maintenance, including, SRS, SDB, DDB, UTP, ITP and STP.

Technology Used

- Virtual server control
- MSI
- PCAnywhere
- .Net Framework
- WSH
- Shell programming and SSL Server Deployment

Benefits to Customer

- The intelligent system that Intechno developed for the customer enhanced greatly the efficiency of the MPlus project deployments, reduced the work pressure for testing staff and improved the systems security.
